

BizInt Smart Charts

Viewer

Mini Guide

BizInt Smart Charts Viewer 3.5 is a tool for viewing, customizing, printing and exporting reports created with:

- BizInt Smart Charts for Drug Pipelines
- BizInt Smart Charts for Patents
- BizInt Web Charts for Adis Insight
- BizInt WebCharts TrialTrove Edition

BizInt Smart Charts Viewer provides the same features as other BizInt Smart Charts products, except:

- chart creation (File|New, File|Import)
- chart combining & updating (File|Combine, File|Update)
- tools for identifying common patent families, drug names, and trial IDs.

Opening charts with BizInt Smart Charts Viewer

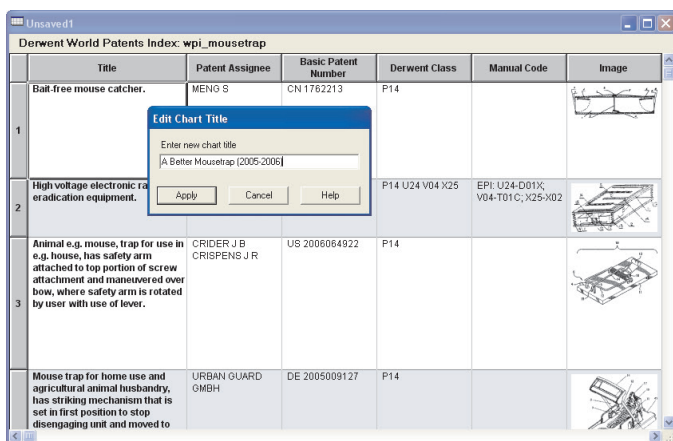

To open a chart file, use File | Open or drag the file from the desktop into BizInt Smart Charts Viewer. You can open a chart file created with:

- BizInt Smart Charts for Drug Pipelines (.cht)
- BizInt Smart Charts for Patents (.chp)
- Adis Web Charts (.wct)
- BizInt WebCharts for Citeline TrialTrove or Citeline Pipeline (.tct)

Saving and titling your report

Use File | Save or File | Save As to save your report as a .cht or .chp file.

You can change the chart title by double clicking on the chart title (or the word "Untitled") or using View | Title.

The following pages show how to view, customize, print and export your report.

View charts, records and images

About BizInt Smart Charts

A chart (table) in BizInt Smart Charts combines the functionality of a spreadsheet and a table. Each database record is represented by a row in the chart. A column represents a field (or elements of a field) from each record. BizInt Smart Charts supports columns containing images and “subtables” – tables within cells, such as Patent Family or Drug Development Status.

Viewing Records

To view the record associated with a row, double-click on the row number button, or select the row and View | Records. You can use the arrow buttons or drop-down menu to move between records. Close the Record Viewer or select View | Chart to return to the chart.

For some sources you have the option to view the related record on the publisher website by selecting View | Record on Publisher Website.

Records: TAP Pipeline 2004

1: apomorphine HCl, TAP
2: apomorphine HCl, TAP
3: cefditoren pivoxil
4: CEP-701
5: febuxostat
6: FR-229934

 Abbott Laboratories: Licensee for development and marketing
 TAP Pharmaceuticals Inc (Abbott Laboratories): Licensee for development and marketing
 Takeda Europe R&D Centre Ltd (Takeda Chemical Industries Ltd): Licensee for development and marketing
 Takeda Chemical Industries Ltd: Licensee for development and marketing

Viewing Images

Follow the same basic steps to view associated images, e.g., select View | Images or double-click on the image in the chart. Images will automatically scale to fit the window and you can use the drop down menu to zoom the image.

You can also paste images from the Windows clipboard into any cell using Edit | Paste.

Editing and Highlighting Text

You can edit text in any cell, including subcells, by clicking in the cell and typing. To apply a yellow highlight to cells or rows, use Text | Highlight Cells or Text | Highlight Rows. Turn highlighting on and off using View | Enable Highlights.

You cannot apply a style (e.g. bold, italics, color) to *individual words or phrases* in the chart or records.

BizInt Smart Charts Viewer is compatible with Windows 7, Windows Vista, Windows XP and Windows 2000.

Customizing your report

Hiding and Moving Rows

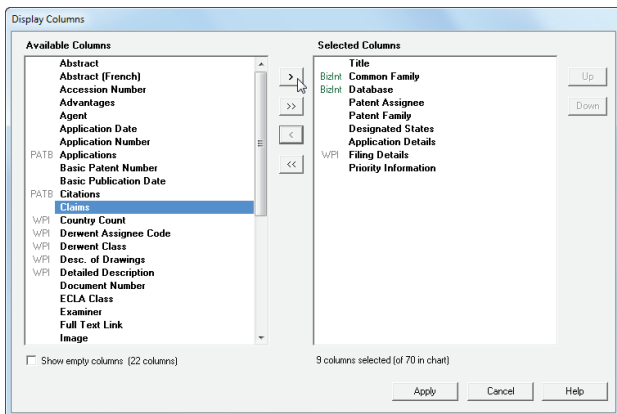

To hide rows, use **Edit | Hide Rows** or de-select the rows on the **View | Rows** panel. You can select a range of rows and use **Ctrl-H** as a shortcut to hide the rows. Hidden rows will not appear in exported or printed reports.

Use **View | Rows** to rearrange rows or **Edit | Move Row** to move rows in the chart.

Changing Columns

To select and rearrange columns, select **View | Columns**. On the left side, you will see all the columns in your chart. Add the columns you wish to display to the “Selected Columns” panel at right. Drag the column name or use the **Up/Down** buttons to rearrange the order of the columns.

Adding User Columns

To add your own column, select **Edit | Add Column**. A new untitled column appears on the right side of the chart. Double-click on the column title to change the title. You can change properties of columns using **View | Column Properties**.

Sorting Rows

To sort the rows, select **View | Sort**. You can sort on multiple columns, in ascending or descending order. Use the check box to control row shading.

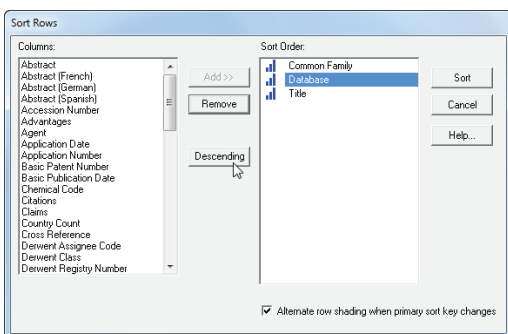

Creating and Applying Chart Templates

You can create your own chart template by creating a chart you like, then saving this template using **File | Save as Template**.

To apply a new chart template, select **View | Apply Template**.

Creating Simple Statistics

To create a count of unique values in a column, select **View | Statistics** and select a column. Statistics will be saved in a .csv file and can be analyzed in Excel.

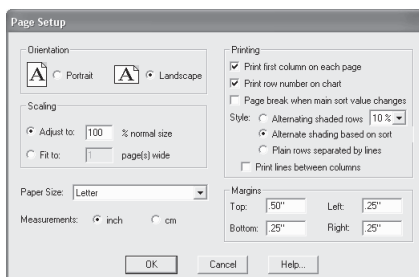

Printing reports

You can change the print settings under File | Page Setup. Under scaling, you can specify that the chart fits on a specified number of pages in width.

Use File | Print to print the chart, records, and images. You can print the current record, all records, or a range of records.

Use File | Print Preview to preview the appearance of a printed chart.

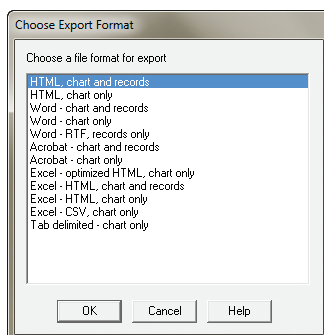

Exporting reports

To distribute your report in Word, Excel, Acrobat or HTML, use File | Export and choose the appropriate Export Format. There are advantages and disadvantages to every BizInt export format. Detailed information on export formats is available at:

www.bizcharts.com/Tips – “Distributing Reports”

Recommended Export Formats

- **HTML** (chart and records, chart only): creates an HTML file which can be viewed in a browser.
- **Word** (chart and records, chart only): creates an HTML file with the chart (and optionally the records and images) which is opened in Microsoft Word. This format is good for reports which will be distributed by email. You can also export the records only as an RTF file.
- **Acrobat** (chart and records, chart only): creates an HTML file which is opened in Adobe Acrobat and can be saved as a PDF. This format is ideal for reports containing images and for printing.
- **Excel - optimized HTML** (chart only): creates an HTML file which preserves most formatting while creating only one row in Excel for each BizInt Smart Charts row. You can also export in .CSV format for analysis in Excel.
