What's New

Software for
Business Intelligence

BizInt Smart Charts

BizInt Smart Charts
Drug Development Suite

VERSION **5.8**

Current release: 5.8.2 (Jan 2025)

Key new features in Version 5

Improved Chart Creation and Templates

- No need to select a template on chart creation; an Editor's Choice template applies a standard set of columns, or you can choose a default template.
- New Manage Templates panel lets you rename and delete templates. The Save as Template and Apply Template panels have been enhanced.

New Export Options

- Major refresh of Word, Excel and HTML exports, with new and updated styles.
  Learn more at bizint.com/exports

Smart Data Integrator – new workflow and features

- Reference Rows has been renamed **Smart Chart Integrator.** You will also see references to "Integrated Rows."
- **Hide Integrated Rows:** use the Hide Integrated Row command on the right-mouse menu. You can also hide and rearrange Integrated Rows (and make them visible again) with the new View | Integrated Rows panel.
- Common Drug Name and Common Trial ID columns are now *automatically* generated when you combine charts, or when you send a chart to the Integrator.
- "Preview" button lets you quickly preview Integrated Rows in your browser.

More workflow improvements

- **Hide Multiple Columns**: You can select multiple adjacent columns and hide them with Edit | Hide Column, or on the right-mouse menu.
- **Delete user and VP-SCE columns:** A new Edit | Delete User Column command allows you to *delete* columns added by the user or by VP-SCE. These columns will be permanently removed, saving disk space, memory, and de-cluttering the Choose Column List.

Create pipeline reports combining information from...

...these pipeline databases

Citeline Pharmaprojects

IMS R&D Focus

AdisInsight – Drugs

Cortellis Competitive Intelligence

Cortellis Drug Discovery Intelligence

GlobalData – Pipeline

PatSnap – Synapse (coming in March!)

Drug pipeline databases are supported on publisher websites, Dialog, Ovid, and via InfoDesk Pipeline Plus.

Create clinical trial reports combining information from...

...these commercial clinical trials databases

Citeline	TrialTrove
Springer	AdisInsight – Trials
Clarivate	Cortellis Clinical Trials Intelligence (CTI)
GlobalData	Clinical Trials

...and these trial registry databases.

US NIH	ClinicalTrials.gov (support for new JSON)
WHO	International Clinical Trials Registry Platform (ICTRP)
EU EMA	EU Clinical Trials (EudraCT)

### And, create reports from these biomedical literature databases

Medline	PubMed, Dialog, Ovid, STN
BIOSIS	Dialog, Ovid, STN
EMBASE	Dialog, Ovid, STN

Coming soon – support for PatSnap Synapse!

- Support for pipeline reports in Version 5.9 (March 2025)
- Use the BizInt export format.
- Support for trial reports coming later this year.

patsnap

Pipeline Databases – enhancements

- **Citeline Pharmaprojects:** Adds country details to the Drug Development Phase column, and adds a new Filtered Drug Development Phase column based on your query. (5.6)

- **Improved column/field mapping for combined drug pipeline charts**, starting with companies, mechanism of action, and targets. We will be continuing to improve the process for creating multi-database pipeline reports in upcoming releases (5.3)

- **Support for building pipeline charts from patent searches on both Cortellis and Cortellis Drug Discovery Intelligence.** Please note that one patent might apply to more than one drug, so using Common Drug Name is not advised. (5.3)

- **Cortellis Drug Discovery Intelligence (new Integrity)**: extracts the Chemical Name / Description for drug profiles on the new Integrity platform, Cortellis Drug Discovery Intelligence. The database name in charts and records has been updated to show the new product name (5.3)

- **Cortellis**: Support for new structure images in Cortellis exports. NOTE: Prior versions of the Drug Development Suite will crash when importing search results containing these images. If you don't need structure images in your report, earlier versions will still work when you export without images. (5.3)

- **Phase Sorting:** The new Options | Phase Sort options menu option lets you control how inactive development phases sort.

Clinical Trial Databases – enhancements

- **ClinicalTrials.gov:** Added support for Other Outcomes (5.4.1). Adds support for the JSON exports from the latest generation of ClinicalTrials.gov in Version 5.8.

- **AdisInsight:** Updated the database name for all of the AdisInsight databases. Extract NCT numbers to a column in AdisInsight Trials (5.4)

- **EUDRACT**: Fixed a problem with Common Trial ID when the chart contained rows from EUDRACT (5.4)

Biomedical Literature – enhancements

- **Ovid:** Support for Author Keywords in MEDLINE (5.5). DOI is extracted from the Article Identifiers field (5.7)

- **TrialTrove**: Adds support for new fields such as Drug Targets, Oncology Biomarkers, Endpoint Keywords, and Patient Age Groups (5.6)

- **Dialog**: New Author Affiliation column, with a subtable showing each author and affiliation, currently created from Embase, Medline, and Biosis on Dialog (5.5)

- **STNext**: Support for the new STNext BizInt export. Search term highlighting in BizInt records (not tables) is supported when using this export (5.5) Added Supplemental Terms in Medline and Embase on STN (5.4.1)

- **PubMed**: Adds support for PubMed text exports (PubMed and PubMedCentral), since the XML export is no longer available. (5.3) Captures the Corporate Source / Affiliation in the text export (5.4)

And a few more things...

- **Choose Columns...**: The Columns command on the View menu is now called "Choose Columns..." (5.3)

- **Ctrl-Z keyboard shortcut** has been added to undo the last operation (5.3)

- **Summary Records:** Width of Summary Records export output is now 100% of space between the margins set in Word. Fixed a glitch in how blank cells were formatted (5.4.1)

VantagePoint - Smart Charts Edition (VP-SCE)

- Version 12 released in Summer 2021 with new visualizations - Milestone Timeline, Butterfly, Multi-Donut, Motion Bubble Chart.

- **Contact us to arrange a trial!**

Cookbook of Reports and Visualizations

- New for Version 12, the Cookbook provides examples of reports and visualizations and includes step-by-step "recipes": www.bizint.com/Cookbook

New Releases and "Tips" web page

- You can subscribe to RSS or email announcements of new releases.

- **Help | Check website for newer version** will bring you to the Release Information page on our website.

- **Mini Guide:** updated for BizInt Smart Charts Drug Development Suite 5.4

- Links to support documents, presentations, and useful web pages are now presented on a single web page: **www.bizint.com/tips**

---

20 Years of "Surfing the Pipeline"

- BizInt has been doing "Surfing the Pipeline" case studies since 2002, comparing coverage and content across the leading drug pipeline databases.

- You can see these case studies, including our most recent one, at: bizint.com/surfing
